

# Ultrasonic Testing Machines General Electric, Krautkramer USIP40 and USN60

## Technical Data

- Akkumulator-powered hand apparatus USN 60
- Momentum echo, transmitter/ receiver or acoustic testing handling
- Automated test station USIP 40
- 10 ultrasonic channels
- Broadband and smallband filter
- 4 plotting blinds
- Encoder input for 3 axes

## Area of Use / Application

- Udemolishing test of basic material (metal, fiber glass reinforced plastics, etc.)
- Testing of joint connections (welded connections, adherings, etc.)
- Fixed robotically operated exposure of C-Scan
- Mobile testing of components

Testing of an adhesive joint with USN 60

Automated US-test station with water jet coupling for the exposure of C- images

Ultrasonic- probes for diverse materials and testing tasks
